NHS connectors to major intermodal facilities are considered vital links in the nation’s transportation system. They provide access between arterials and the nation’s most important seaports, airports, rail yards, pipeline facilities, and the nation’s transportation system. NHS connectors to major intermodal facilities are considered vital links in the nation’s transportation system. They are the “last mile” connection between the National Highway System and the nation’s most important seaports, airports, rail yards, pipeline facilities, train stations, and ferry terminals.
